

CAESAR

Software for the management and control of packaging machines

The CAESAR software is designed to be integrated with the Imanpack packaging machines.

It provides management and control over the entire line via Personal Computer, with both fixed or mobile devices (tablet or smartphone).

ADVANTAGES of using CAESAR

- Remote line management.
- Compatibility with your management system
- Collection of production data statistics with the option of generating periodic reports on PCs, tablets and mobile phones.

Connection to your management software

The CAESAR software allows the exchange of information between the packaging machine and the company management system; work orders, recipes, labelling instructions can be transferred from the management system to the Imanpack machine.

Management System

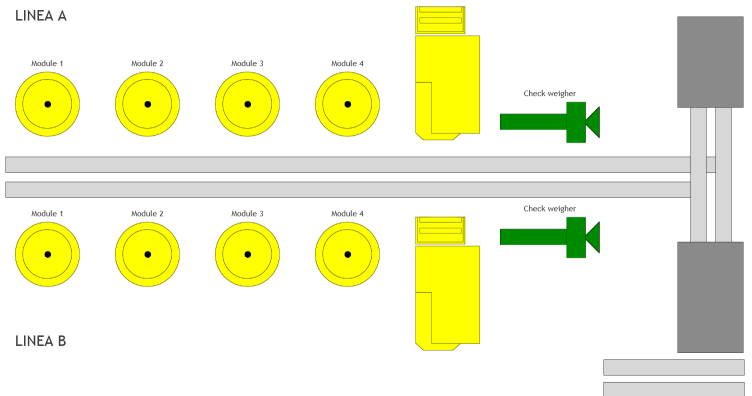

Caesar

System

SYNOPTIC

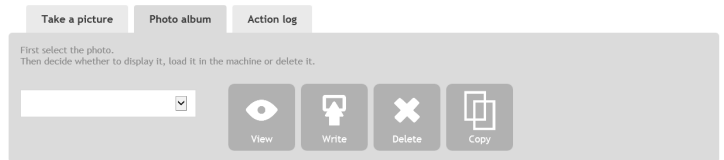

A highly important instrument used to monitor line operating status.

(Graphic representation of the line status)

SAVING OF RECIPES

The CAESAR Software allows users to save the machine settings and retrieve them as needed.

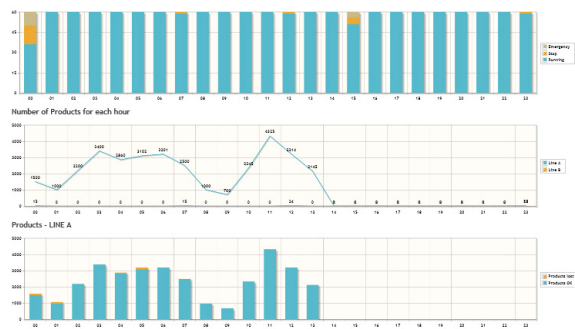

(Saving of retrieval of recipes)

PRODUCTION DATA STATISTICS

The CAESAR software continuously monitors the plant system and saves the production data to a database.

Using a user-friendly graphic interface, you can obtain graphs on the main production data (e.g. packages produced, running time, stop times etc.).

(“Number of pieces produced per hour”)

CONTACT US

Contact us for a free quotation.
We will evaluate together if your Imanpack system can be integrated with the CAESAR software:
